

Stripe Configuration Instructions

To enable payment processing, you need to set up your Stripe API keys:

1. Get Stripe API Keys

- Sign up at <https://stripe.com>
- Go to your Stripe Dashboard
- Navigate to Developers > API keys
- Copy your Publishable key and Secret key

2. Create Stripe Configuration File

- Copy `stripe_config.py.example` to `stripe_config.py`
- Replace the placeholder keys with your actual Stripe API keys:

```
# In stripe_config.py
STRIPE_PUBLISHABLE_KEY_TEST =
"pk_test_51SAWS1A2qQ2Tyd2LvDMdPusMTyv0x3TGgGcghjq3BydDzL1PY4IoL3zyoY63MvTMZHVsw
Jpd9GFRJrK8Wu5UbLuK00MJdkY6AP"
STRIPE_SECRET_KEY_TEST =
"sk_test_51SAWS1A2qQ2Tyd2LFwKyaLgsbjx3t3JqyP08Sx9mjtIWKkQrwkis976S1WfvFB7So9bM0
xNQKi9dMWZyZgJbWr7n00EycxykuS"

# For production (optional)
STRIPE_PUBLISHABLE_KEY_LIVE = "pk_live_your_actual_live_key_here"
STRIPE_SECRET_KEY_LIVE = "sk_live_your_actual_live_key_here"
```

3. Alternative: Environment Variables (Recommended for Production)

Set environment variables (these will override the config file):

```
# Windows
set STRIPE_PUBLISHABLE_KEY=pk_test_your_publishable_key_here
set STRIPE_SECRET_KEY=sk_test_your_secret_key_here

# Linux/Mac
export STRIPE_PUBLISHABLE_KEY=pk_test_your_publishable_key_here
export STRIPE_SECRET_KEY=sk_test_your_secret_key_here
```

4. Test Payment

- Use Stripe test card numbers for testing:
 - Visa: 4242 4242 4242 4242

- Any future expiry date (e.g., 12/25)
- Any 3-digit CVC

5. Production Setup

- Use live keys (pk_live_... and sk_live_...) for production
- Set up proper webhook handling for production reliability
- Configure proper SSL/HTTPS
