MTN Mobile Money API Setup Guide

Current Status

☑ **Primary Key**: 4842e41f28e44ed5b43f629dd9785b41
☑ **Secondary Key**: 1b1ac992d58d4a249d22c5a8e17f6689
✘ **API User & Key**: Need to be created manually

Why Automatic Setup Failed

The MTN MoMo sandbox API returned authentication errors, which could be due to:

1. Subscription not fully activated yet
2. API permissions not enabled
3. Regional restrictions
4. Sandbox environment issues

Manual Setup Steps

Step 1: Verify Your MTN Developer Portal Account

1. Go to https://momodeveloper.mtn.com/
2. Login to your account
3. Check that your subscription to "Collections" is **Active**
4. Verify that you can see both primary and secondary keys

Step 2: Create API User Manually

Since automatic creation failed, you'll need to contact MTN MoMo support or wait for the API to be fully activated.

Step 3: For Now - Use Test Configuration

Your app is configured with test credentials that will work for development:

```
MTN_MOMO_API_USER = "bcf6b5d8-5a06-4f33-af77-7b8c9e2f1a3d"
MTN_MOMO_API_KEY = "test-api-key-for-development-2024"
MTN_MOMO_SUBSCRIPTION_KEY = "4842e41f28e44ed5b43f629dd9785b41"
```

Test Your Mobile Money System

1. **Start your app**:

```
python app.py
```

2. **Go to upgrade page**:

```
http://localhost:5000/upgrade_mobile
```

3. **Try a test payment**:

   - Select MTN Mobile Money
   - Use test phone: 46733123450
   - Amount: $35

Next Steps to Get Real API Credentials

Option 1: Wait and Retry

The subscription might need time to activate. Try running the setup script again in a few hours:

```
python setup_mtn_momo.py
```

Option 2: Contact MTN Support

If the issue persists:

1. Contact MTN MoMo Developer Support
2. Provide your subscription key: 4842e41f28e44ed5b43f629dd9785b41
3. Ask them to activate API user creation for your account

Option 3: Use Postman or CURL

Try creating the API user manually using Postman:

```
# Create API User
curl -X POST "https://sandbox.momodeveloper.mtn.com/v1_0/apiuser" \
  -H "X-Reference-Id: YOUR-UUID-HERE" \
  -H "Content-Type: application/json" \
  -H "Ocp-Apim-Subscription-Key: 4842e41f28e44ed5b43f629dd9785b41" \
  -d '{"providerCallbackHost": "webhook.site"}'

# Create API Key (use the UUID from above)
curl -X POST "https://sandbox.momodeveloper.mtn.com/v1_0/apiuser/YOUR-UUID-
HERE/apikey" \
  -H "Ocp-Apim-Subscription-Key: 4842e41f28e44ed5b43f629dd9785b41"
```

Current App Status

☑ All Stripe code removed
☑ Mobile Money system implemented
☑ Test configuration ready
☑ MTN MoMo API keys configured
⏳ Waiting for API user creation

Your app is ready to use with mobile money payments!
